

Dispensing Solenoid Valves for Vending Machine

Model V90WD

Model V90D

These valves are direct acting. Hence when coil is energized spring loaded diaphragm is lifted. To ensure long trouble free life, armature is isolated and remains dry. Dispensing valves are used as two way normally closed valve and are designed to be used vertical position, however may be used horizontally

Features

- ✓ "F" class, 155° C, plastic encapsulated coil.
- ✓ 6.35 mm spade type connector for quick connection and molded connector for greater detachment strength.
- ✓ Continuous duty.
